

## Tycon Solar™ Mount Washer Plate - Instructions

1. The purpose of the washer plate (5600056) is to add strength to the pole brackets in order to prevent metal fatigue in sustained high winds when 4 panels are mounted. The washer plate is only used on the original pole bracket design.

2. Before attaching the horizontal brackets to the pole using hose clamps, place the washer plate inside the bracket, then install the hose clamps thru both the aluminum bracket and the steel washer plate.

3. The washer plate will prevent the bracket aluminum from tearing in very high winds when 4 panels are mounted.
